

Advances since mifepristone approval in the U.S.

Two decades of research, action and impact

Since its inception, Gynuity viewed mifepristone abortion as a revolutionary technology with the potential to increase autonomy and choice in the reproductive realm. Our aim has been to contribute to its availability in every way. Here we reflect on our work during the last two decades of increasing access to medical abortion (MA).

Mifepristone approved in the U.S.

2000

2003

[Gynuity Health Projects](#) was founded continuing and expanding on research started at The Population Council with the vision of a world in which each individual has access to safe and effective reproductive and maternal health care
